

How will your grandchildren view Santa Claus?

Scientists now estimate that Arctic summers will be ice free by 2013¹.

You can easily make a difference by powering your home with green energy, which is generated using renewable resources like wind, solar, hydroelectric and geothermal.

<p>Environmental Benefits: Minimal, if any, CO₂ or other pollutants such as carbon monoxide, sulfur dioxide, lead and mercury, all of which are produced in the creation of energy through the use of fossil fuels.</p>	<p>Stimulate the Economy: Importing fossil fuels sends billions of dollars annually out of the country. Renewable energy resources will be developed and deployed by Americans, for Americans.</p>
<p>Energy Security = National Security: Our national security is strengthened as we reduce our reliance on foreign oil imported from volatile regions of the world.</p>	<p>Future Generations: The world we leave to our children and our grandchildren depends on the actions we take today.</p>
